diagnosis and treatment of diseases and disorders of the skin by laboratory examination of cells) are not only helping patients turn back the clock with the most advanced anti-aging, skin tightening and wrinkle eliminating treatments available—they now offer in their offices the latest technology to permanently rid unsightly fat bulges that plague

the stomach area, love handle on the sides of the waist and those embarrassing fat bulges on the back. No surgery. Permanent fat and inches lost. How great is that?

Well, it's a dream come true for women and men all ages, who no matter how much they exercise or diet can't lose fat inches on their bodies. The treatment is called Zeltiq CoolSculpting and it is the ONLY FDA approved device that permanently reduces fat. For years, hit and miss, invasive and body traumatizing liposuction surgery seemed to be the only path to fat removal. And for some people it even worked. But for others it did not. Thousands of liposuction patients were left with unsightly and uneven bulges, and

"At first I was hesitant. It sounded too good to be true! Then, I did my research and actually had the procedure performed on myself. The results were amazing. I was convinced."

Dr. Richard Salit

indents caused by too much or too little fat removal or worse damaged muscle or loss in areas treated. Other liposuction hopefuls were afraid to undergo the surgery, and didn't want to endure the pain involved, unsightly bruising or the downtime. Some people just couldn't afford the cost. Those days are gone.

Dr. OZ says the procedure is "Revolutionary and a game changer."

What is Zeltiq CoolSculpting?

Referred to as "The Cool Solution" the Cool Sculpting procedure targets fat areas on the body with a non-invasive, cooling method eliminating fat cells without damage to other tissues. The precisely controlled cooling method takes one-to-three hours during which the CoolSculpting device draws the fat bulge up between two cooling panels, with the sensation of a firm tug and pull to ensure the tissue will be cooled efficiently. Patients feel a sensation of intense cold that quickly vanishes. Patients are seated or lie down during the procedure reading, working on their lap tops, or taking a nap. After the procedure some have a slight redness, minor bruising, tingling, or numbing in the area which fade quickly. After the procedure, the patient's own body takes over and goes to work immediately flushing out the fat cells naturally from the body. This continues over two to four months as fat cells continue to be naturally eliminated.

"I tell my patients that for the first time ever there is a non-invasive modality to safely and consistently remove small bulges," says Dr. Rahimi. "Best of all, there is no downtime and the procedure can literally be performed during your lunchtime. CoolSculpting research shows that over 85% of patients are very happy with just one CoolSculpting treatment. This is an astounding positive result for a non-invasive procedure."

Zeltiq CoolSculpting is the latest & greatest non-invasive, fat busting procedure. More important. It's the ONLY FDA approved non-invasive treatment to permanently reduce fat.

diately and begin to see results in as little as three weeks. Fat layers are reduced by 20% to 40%; depending on the individual patient. Additional CoolSculpting procedures can be done within two to four months. Exact fat loss percentages depends on an individual's specific case and with each CoolSculpting procedure an additional 25% of fat is dissolved.

More Fat Busting Help.
